

Big Data Use Cases

Industries leveraging Big Data

- Data driven companies have a competitive edge over peers
- Leverage data insights to improve decision making, enter new markets, and enhance customer experiences

Industries using Big Data

Retail

Finance

Manufacturing

Automobile

Telecom

Insurance

Industry-wise usage of Big Data

Big Data Usage, by Industry

Big Data in retail

Price Analytics

- Understand market segmentation, identify best price points, and perform margin analysis

Sentiment Analysis

- Leverage social media to gauge customer perception and devise an effective marketing strategy

Big Data in insurance

Fraud Analytics

- Spot fraudulent claims and detect anomalies

Risk Assessment

- Use predictive modeling to identify high-risk customers

Big Data in telecommunications

- Improved network security
- Contextualized location-based promotions
- Real-time network analytics
- Optimized pricing

Big Data in manufacturing

Predictive Maintenance

- Analyze equipment usage patterns and predict equipment failure, maintenance requirements, and parts replacement

Production Optimization

- Understand the production lines, analyze increased production time to recommend optimizations

Big Data in automotive industry

Predictive Support

- Predict malfunctions, pre-emptive ordering of parts and repair suggestions

Connected self-driven cars

- Real-time data analysis for autonomous driving

Big Data in finance

Customer Segmentation

- Products offered based on customer demographics, transaction frequency, behavior patterns, social media posts and interactions with customer service systems

Algorithmic Trading

- Make machine learning-based decisions using instant analysis of large quantities of data
